SETUP CHECKLIST

Performing these checklist items in advance will streamline
the physical setup of your device.

Verify your WiFi

☐ Is WiFi available at your location? (Skip this if you're using LAN.)

☐ What is the WiFi network name and password?

☐ Is the WiFi signal where you'll be putting the device strong enough? A
weak signal can frustrate your setup effort.

   TIP: Try running a test with your smartphone.

Verify your power source

☐ Is there an available power source within range of the device? Wall
outlets or power bars within 3 ft are generally best.

   TIP: A short 'Y-splitter' extension cord can often let you use the same
   outlet as the TV

☐ Can the power source supply the required 10W of power (5V x
2A)? This usually means a wall outlet, since most TV USB ports
max out at 7.5W.

Verify your equipment

Before you get started you'll need:

☐ a ScreenScape Connect device and cables (the power and HDMI cables
that came in the box)

☐ a 'Y-splitter' extension cord (optional)

☐ a TV with an HDMI port

☐ a USB keyboard (required) and mouse (recommended)
